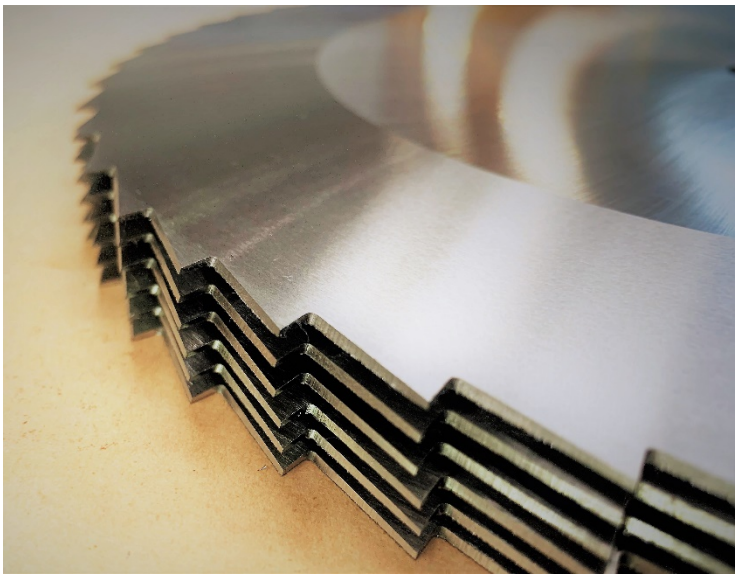
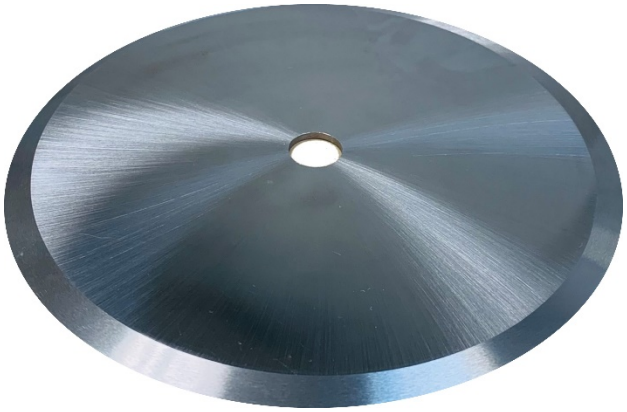
KINKELDERUSA®
the cutting experts

Premium Circular Knife Blades
For Food Processing

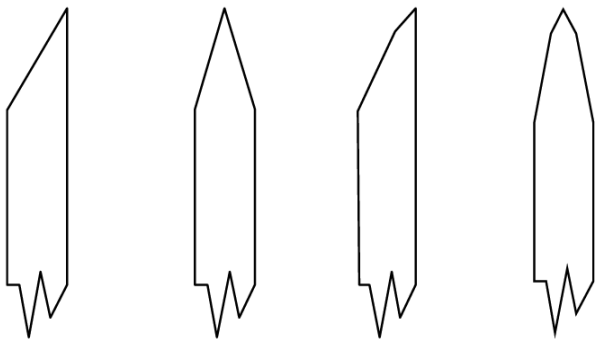


YOUR BENEFITS

- More than 25 years of manufacturing expertise and hands-on application experience
- Lowest cost per cut
- The best raw material available
- Consistent production results
- Short lead-times
- Reduced stocking requirements of new blades



KNIFE EDGE TYPES



Single bevel | Double bevel | Compound single bevel | Compound double bevel

Premium Circular Knife Blades
For Food Processing

FDA APPROVED

ELITE SERIES COATING

THINCUT Elite Series industrial nonstick coating is unique because it is formulated with special blends of fluoropolymers and other high-performance resins. This formulation gives it the ability to form layers, or stratify, in the cure process, which makes the fluoropolymer more concentrated at the surface.

- Chemical Resistance
- Abrasion Resistance
- Corrosion Protection
- Low Coefficient of Friction
- USDA Approved for Food Contact
- Coating Thickness of 0.8 mil
- Provides Dry Lubrication

THINCUT ELITE

The Elite Series coating offers excellent adhesion, durability, heat resistance and nonstick properties which make it a good choice in abrasive or high temperature environments where dry lubrication is needed. It is an excellent choice for the food processing industry because of its release qualities and FDA approval.
