Duralloy

Duralloy is a low-temperature, multi-stage metal finishing process improved from chrome plating technology. Unlike conventional chrome-plating processes, the Duralloy process utilizes proprietary chemical solutions and unique application techniques.

Added Benefits of Duralloy Plating

- *Reduced wear and friction.*
- *Enhanced corrosion resistance*
- *No chipping, cracking or peeling from the basis meta*
- *Smoother, faster and quieter running equipment*
- **78 HRc surface hardness**

Low Friction Coefficient of Duralloy Plating

Duralloy is a low friction coating due to special techniques used in its application. The low coefficient of friction is invaluable especially in situations where extreme temperatures are involved or material adhesion is a problem.
